How a financial cybercrime group is organized
Kaspersky Lab is actively investigating five large, Russian-speaking cybercriminal groups involved in stealing money using malicious software.
Leader
Virus writer/ Programmer
Head of the money mules service
Malware-packing service
Traffic dealer
Spammer
Downloads
Distributors
Money mules manager
System administrator
Assistant
Money flow manager
Money mules
Server setup
Cash withdrawal
The Money flow manager transfers funds from attacked financial accounts to accounts provided by the Money mules manager. The Money mules manager instructs the money mules where to transfer the money. A share of the stolen money ends up with the Head of the money mules service, while the rest is transferred to the Leader of the criminal group.

Sanchit Khera is presenting
Cyber crime has become a profession and the demographic of your typical cyber criminal is changing rapidly, from bedroom-bound geek to the type of organized gangster more traditionally associated with drug-trafficking, extortion and money laundering.
It has become possible for people with comparatively low technical skills to steal thousands of pounds a day without leaving their homes. In fact, to make more money than can be made selling heroin (and with far less risk), the only time the criminal need leave his PC is to collect his cash. Sometimes they don't even need to do that.
